Pırlanta Erciyes İnşaat opts for Mitsubishi Electric air-conditioning systems

MITSUBISHI ELECTRIC ADDS COMFORT TO SMART HOUSES OF PIRLANTA

Pırlanta Erciyes İnşaat, a construction company operating in Adana for 45 years and distinguished for smart home projects, executed a contract with global giant Mitsubishi Electric for the air-conditioning systems of Prestij XL Concept and Venüs Premium projects. As a company recognized for its principles of high quality, comfort and customer satisfaction, Pırlanta Erciyes İnşaat will introduce the high technology and eco-friendly approach of Mitsubishi Electric to its housing projects.

Pırlanta Erciyes İnşaat opted for Mitsubishi Electric's **Deluxe Power Series** indoor unit multi air-conditioner systems for Prestij XL Concept and Venüs Premium projects comprised of 64 and 94 apartments respectively in line with its mission requiring it to consider comfort as a way of life rather than luxury while choosing the products and services to be used for its projects.

Energy efficiency accompanies maximum comfort

Mitsubishi Electric, which is recognized for upholding customer satisfaction with its high tech eco-friendly products and solution oriented services, will provide optimum comfort and energy efficiency with its multi system equipment for both projects.

Mitsubishi Electric's **Deluxe Power Series** with high seasonal efficiency offers eight different capacity options to meet all kinds of requirements. It provides an ideal engineering solution with compact equipment designed for small capacity requirements with silent operation advantage without causing concussion. It regulates air flow with the help of horizontal oscillation technology to combine luxury and comfort

seamlessly. “Deluxe Power” series products guarantee energy saving thanks to special “Econo Cool” technology in addition to providing optimum comfort by minimizing noise level at low fan speed. Weekly scheduling feature enables users to customize the air-conditioning systems. Nano platinum filter is capable of conducting 3-dimensional filtration and helps to maximize oxygen level in the room with the help of the anti-allergenic filtering feature.

Mitsubishi Electric multi systems are also distinguished with the wide range of options comprised of two different series with nine outdoor units in total. The systems provide ideal solutions for both domicile and office spaces as they make it possible to choose among twelve different types of indoor units. The systems contribute to the flexibility of building designs as they are capable of operating smoothly and effectively even under long piping distance. Mitsubishi Electric Deluxe Power indoor unit multi systems are compatible with smart home systems and guarantee effective air-conditioning even between atmospheric temperatures of -15 and +46 degrees in winter and summer, respectively.

The pillars of Mitsubishi Electric Air-Conditioning Systems are energy efficiency, compatibility with smart home systems and elegant design combined with high technology. Another important factor is not to sacrifice optimum comfort and quality level. Distinguished with the prestigious projects undertaken in both Turkey and the world, Mitsubishi Electric is appreciated globally thanks to a number of advantages such as product quality, high technology, service, maintenance and after-sales service quality.
