**Renaissance İstanbul Polat Bosphorus Hotel contracts Mitsubishi Electric
for elevators**

CONSTRUCTION EXPERT PREFERS SAFE SPEED

Global giant Mitsubishi Electric supplied fast, safe, comfortable and long-lasting elevators for Renaissance İstanbul Polat Bosphorus Hotel, a project undertaken by Polat İnşaat which is recognized for various residence, office, hotel, shopping mall and industrial plant construction projects for 61 years.

Polat İnşaat, a subsidiary of İbrahim Polat Holding which operates in construction, ceramics, sanitary ware and tourism industries through its domestic and foreign affiliates, prioritizes combining state-of-the-art technology and long-term know-how with respect for human beings and environment with due regard for customer satisfaction, safety and service excellence. Dedicated to collaborating with well-qualified business partners to achieve its mission, Polat İnşaat preferred Mitsubishi Electric for Renaissance İstanbul Polat Bosphorus Hotel in Balmumcu, Beşiktaş, İstanbul for supplying eco-friendly elevators guaranteeing passenger safety, speed, maximum comfort and long-term operating life.

High technology providing safety and comfort...

Manufacturing and assembling elevators with high level safety, comfort, performance and high technology, Mitsubishi Electric is distinguished with prestigious projects in Turkey as in the rest of the world. Creating difference with its product, service and maintenance quality, travel comfort and high technology, Mitsubishi Electric has added value to Renaissance İstanbul Polat Bosphorus Hotel by İbrahim Polat Holding. Renaissance İstanbul Polat Bosphorus Hotel uses Mitsubishi Electric machine-room (MR) and machine-room-less (MRL) elevators with 800 kg and 1,600 kg capacity with 2.5 metres, 1.75 metres and 1 metre speed per second.

No need for modernization for 25 years!

Mitsubishi Electric elevators supplied for Renaissance İstanbul Polat Bosphorus Hotel provide high safety during power cuts and earthquakes. In case of a natural disaster, elevators stop at the nearest floor to evict the passengers. As the elevators are equipped with a secondary back-up system, the risk of getting stuck halfway between two floors is completely eliminated even if

there is a problem with the control board. Recognized for the high safety precautions and low breakdown rates, Mitsubishi Electric elevators do not require modernization for 20 to 25 years on average thanks to their high technology which leads to significant cost savings for investors like Polat İnşaat.

High energy efficiency and environmental awareness

All the elevator cars are equipped with LED lights and the car lighting/ventilation fan is turned off automatically if there are no calls for a specified period in order to ensure high energy efficiency. As permanent magnetic gearless traction machine and door machines reduce power consumption, Mitsubishi Electric elevators are distinguished from eco-friendly products owing to various advantages such as travel comfort and low noise (below 45 db) in addition to not requiring lubrication operations.

24/7 support with experienced team

ETA-MELCO, the exclusive distributor of Mitsubishi Electric elevators and escalators in Turkey, offers services from the beginning till the completion of the projects with a professional team comprised of engineers and technicians experienced in design, installation/assembly, maintenance and all other technical matters. Distinguished with its service quality and speed, ETA-MELCO provides support services on 24/7 basis.
