

A Step That Raises the Bar in Sustainability Efforts

Mitsubishi Electric CNC Refurbishment Center Begins Operations

One of the world's leading CNC manufacturers, Mitsubishi Electric is contributing to a sustainable future with the launch of its "CNC Refurbishment Center" at its headquarters building in Türkiye. At this center, end-of-life or faulty CNC products are refurbished to new-product standards and returned to use with high quality and warranty assurance. With the CNC Refurbishment Center, which makes a significant contribution to recycling, Mitsubishi Electric Türkiye also supports Mitsubishi Electric's 2050 Environmental Sustainability Vision.

By combining its global vision with a strong commitment to sustainability, Mitsubishi Electric continues to act decisively in fulfilling its environmental responsibilities. Most recently, the company has taken customer satisfaction one step further with the CNC Refurbishment Center launched at its headquarters in Türkiye. Operating under the Mitsubishi Electric CNC organization, this center refurbishes faulty or end-of-life products and brings them back into use, reflecting the company's confidence in the potential of Türkiye's industrial sector and its long-term, satisfaction-driven strategic goals with business partners.

Nurettin Geçgel, General Manager of Mitsubishi Electric Türkiye Factory Automation Systems, emphasized that Mitsubishi Electric makes significant contributions to recycling and the circular economy through both its global vision and operational processes. "Sustainability is of critical importance for the future of our planet. Mitsubishi Electric demonstrates its determination in this field through its global environmental policies and develops environmentally friendly solutions to leave a more livable world for future generations. As Mitsubishi Electric Türkiye, with the CNC Refurbishment Center launched at our headquarters, we are making a meaningful contribution to reducing technological waste by reintegrating old and faulty products into production systems. In doing so, we support the development of the industrial economy in Türkiye by improving product life cycles. We will continue our efforts without slowing down to achieve and further advance our goals in this area," said Geçgel. He added, "We have a service approach in which customer satisfaction is the most important parameter. With this investment, we refurbish our products without compromising Mitsubishi Electric's high quality standards."
